Product Name : Sperm Counting Chamber

Advantages:

- Applied spermatozoa are uniformly distributed and monolayered, and are observed in one focal plane.
- Dilution is unnecessary even with concentrated specimens. Analysis is done directly from original specimen in its natural environment.
- All spermatozoa acquire friction free, horizontal movement and are always examined under constant conditions.
- The specimen can be analyzed quickly as an office procedure while the patient is waiting, and even by an inexperienced person.
- Accuracy of analysis is enhanced through the elimination of the various steps required by the usual hemocytometric technique. In addition, the fact that sperm motility is examined each time under identical conditions further increases accuracy. Errors incurred by uncontrolled pressure applied to the cover slip are thus avoided.
- The 10 micron depth of the Sperm Chamber is ideal for still or movie camera photomicrography, as it approximately matches the field depth of the objective used in semen analysis.
- The Chamber is quickly and easily available for reuse. In a busy laboratory a large number of tests per hour can be made by a single technician with minimal technical and material requirement
